(URL, http://www.%anger.ac.uk/Projects/M_tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markov Model of TB genes implemented in Taparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon gaty, gty, or ttg) which is preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Deciphering the biology of Mycobacterium tuberculosis from the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Direct Submission
Submitted (11-JUN-1998) Submitted on behalf of the Mycobacterium tuberculosis sequencing and mapping teams, Sanger Centre, Wellcome Trust Genome Campus, Hinxton, Cambridge CBIO ISA Unite de Genetique Moleculaire Bacterienne, Institut Pasteur, 28 rue du Docteur Roux, 75724 Paris Cedex 15, France E-mail: parkhill@sanger.ac.uk on Jun 27, 1998 this sequence version replaced gi:1405752.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /note="RY0084, (MTCY251.02), len: 316,hycb, similar to MTCD_ECOLI P16430 formate hydrogentyses subunit 4 (307 aa) FASTA scores, opt: 570, z-score: 591.6, E(): 2.1e-26, (33.8% identity in 305 aa overlap) and NUOH_ECOLI 933.03nandh dehydrogenase i chain h (325 aa) FASTA scores, opt: 207, z-score:220.7, E(): 9.5e-06, (26.5% identity in 260 aaoverlap)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gene prediction was based on a Hidden Markov Model of TB genes implemented in TBparse (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G + C. CAUTION: In some cases we may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atq. 9tq. or tdg) which is preceded by an upstream ribusome binding site sequence (optimally 5-13bp before the initiation codon).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Details of M. tuberculosis sequencing at the Sanger Centre are available on the World Wide Web. (UKL, http://www.sanger.ac.uk/Projects/M_tuberculosis/) (DS have been renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Deciphering the biology of Mycobacterium tuberculosis from the complete genome sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Details of M.-tuberculosis sequencing at the Sanger Centre are available on the World Wide Web.

(URL, http://www.sanger.ac.uk/Projects/M.tuberculosis/) CDS have (URL, http://www.sanger.ac.uk/Projects/M.tuberculosis/) CDS have been renumbered from the original cosmid submissions but the old peen renumbered from the original cosmid submissions but the old gene designations are in brackets after the new gene numbers. Gene prediction was based on a Hidden Markow Model of TB genes implemented in TBpares (Krogh) supplemented with visual inspection of positional base preference in codons, especially where there is an increase in the observed/expected third position G i C. CAUTION: In some cases we may not have predicted the correct initiation codon. Where pussible we choose an initiation codon initiation which is preceded by an upstream ribusione binding site sequence (optimally 5-1 bp before the initiation codon). If this cannot be identified we choose in most upstream

probable precursor of serine protesse. Has putative signal peptideat N-terminus and hydrophobic stretch at peptideat N-terminus three signatures typical of subtilase family: asparic acid active site (PS00136), histidine active site (PS00136), histidine active site (PS00138), serine active site (PS00138), FASTA results: 903863 SERINEPROTEASE (390 aa) opt: 241: E(): Results: 38:08 identity in 387 aa overlap), similar to mycylsfolo 29 (45.7% identity in 451 aa overlap)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        //codon_start=1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mycobacterium tuberculosis DNA - confers ability to enhance uptake of therapeutic agents e.g. antibiotics, also useful in vaccines
                                                                    A DNA molecule (AAT3358) codes for a protein (AAW02303) that confers on Mycobacterium tuberculosis an ability to survive within macrophages. It is a fragment of a larger molecule (AAT3355) obtd. by ligating M. tuberculosis genomic DNA fragments into pBluescript II vector and screening recombinant E. coli strains for HeLa cellinvasive clones. It can be incorporated into a vector and used for prodn. of recombinant macrophage survival protein, which is useful in vaccines or for facilitating uptake of other materials, e.g. therapeutic genes, into mammalian cells. A second DNA molecule tuberculosis the ability to enter mammalian cells.
                                                                            protein (AAW02303) that confers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         278 cycygyccacctttgaagccgtyctayccaaactgyccycccccyycycyaccaaccccy 337

The present sequence encodes a Mycobacterium tuberculosis cellular uptake protein fragment, which confers on M. tuberculosis an ability to survive within macrophages.

The protein can be used in a vaccine to prevent M. tuberculosis infection, and provide for the uptake in cells of, e.g. antibiotics, DNA fragments or anti-neoplastic agents. Antibudies raised against it can be used to treat mammals already exposed to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             tuberculosis, to induce a passive immunity and prevent disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA encoding for cellular uptake of Mycobacterium tuberculosis used to develop prods for vaccines, passive immunisation and diagnosis and cellular uptake of other materials
                                                                                                                                                                                                                                                                                                                                                                                                                              .

A DNA molecule (AAT33656) confers on Mycobacterium tuberculosis an ability to enter mammalian cells and to survive within macrophages. The enter mammalian cells and to survive within macrophages. By igating M. tuberculosis genomic DNA fragments into pBluescript II vector and screening recombinant E. coli strains for HeLa cellinasive clones. The DNA includes 2 separate coding regions (see also ART33657-58) coding for the cell entry (AAM02302) and macrophage survival (AAM02303) proteins. It can be used to produce the cellular uptake proteins used as vaccines or to facilitate uptake of other

     macrophages. It encodes a polypeptide having a mol. wt. of about 50°55 kDa, pref. 52 kDa. The AA sequence represents a highly hydropholic proform with a hydropholoic region at its carboxy terminus. It could be a secreted protein, a cytoplasmic protein, or a surface protein with its carboxy terminus attached to the outer membrane of the organism. The deduced AA sequence is in AAR71931.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DNA giving M. tuberculosis ability to enter mammalian cells and/or survive within macrophage(s), useful in vaccines to protect mammals against Mycobacterium tuberculosis infection

                                                                                                                                             This DNA sequence comprises Mycobacterium bovis BCG deletion sequence BCGdelta3. A specific genetic deletion of this region results in an avirulance phenotype of the mycobacterium. 2 other deletion regions (see AAT33535 and AAT33536) have also been detected. Identification involved screening a BCG cosmid library with a
                                                                                                                            Gaps
ability to enter mammalian cells and to survive within macrophages. The protein can be used in a vaccine to prevent M. tuberculosis infection, and provide for the uptake in cells of, e.g. antibiotics, DNA fragments or anti-neoplastic agents. Antibodies raised against it can be used to treat mammals already exposed to M. tuberculosis, to induce a passive immunity and prevent disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ĥ
radiolabeled probe obtained following DNA subtraction between virulent Mycobacterium tuberculosis H37Rv and avirulent BCG. The deletions provide useful markers for the identification of an avirulent, or a virulent, mycobacterial phenotype. Determination of avirulence requires the detection of the presence or absence of the deletions are detected either by detecting the presence or absence of deletion junctions (see AAT33538-46), or by detecting the presence or absence or absence of the presence or absence of all the presence or absence of absence of the sequences contained within the detection. Deletion polypoptides are used as components of immunological assays and in vaccines.

                                                                                                                                                                    ö
are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lygine. The present sequence is a nucleic acid described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the

AAF71753 to AAF72380 encode the Corpuebacterium qlutamicum metabolic pathway (MP) proteins given in AAB79634 to AAB80211. The C. glutamicum MP nucleic acids are useful for the production of fine chemicals in microorganisms, including organic acids, nonproteinogenic amino acids, purine and pyrimidine bases, nucleosides, nucleotides, lipids, saturated and unsaturated fatty acids, diols, carbohydrates, aromatic compounds, vilamins, cofactors, polyketides and enzymes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        pathway proteins, useful for producing fine chemicals in microorganisms, including organic acids, nonproteinogenic amino acids, and purine and pyrimidine bases:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acids from Corynebacterium glutamicum encoding metabolic

Type III secretion systems allow bacteria to target virulence factors directly at host cells. The present sequence is a coding sequence of B. pertussis. No name has been specified for the present sequence. The present sequence may be a housekeeping gene. A pathogenicity island is a compact, distinct genetic unit carrying virulence genes. The present sequence is located within a pathogenicity island (see AAA64890) which also carries, a number of genes encoding proteins involved in the type III secretion system of B. pertussis. See AAA64890-AA64884 and AAB1411-B14146 for details of the coding sequences and provering identified in the pathogenicity island, of the present invention.
                                                                         Type III secretion system; virulence factor; pathogenicity island; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

2 Polynucleotides (AAT72684 and AAT72685) represent 2 distinct clusters of genes encoding enzymes (AAW19734-36 and AAW19737-42) involved in sugar biosynthesis and attachment in Saccharopolyspora erythraea. The eryB genes are involved in the biosynthesis of L-mycarose and the eryC genes involved in the biosynthesis of D-desosamine. Wovel glycosylation-modified polyketides are produced by selectively altering, inactivating or augmenting these eryB and/or eryC genes and introducing them into polyketide-producing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gene cluster; bacterium; enzyme; macrolide; antiblotic; erythromycin; secondary metabolite; eryBII; eryCIII; eryCIII; hybridisation; probe;

The erythromycin gene cluster spans approximately 53 kb and contains at least 20 open reading frames (ORF). This sequence contains the eryBlV, eryBV, eryCVI, eryBVI, eryBVI, eryBVI, eryBVI, eryBVII genes encoding ORFs 13, 14, 15, 16, 17, 18 and 19 respectively. A DNA representing the eryG-eryAIII region of the same

cluster is shown in AAX25772. The genes are used to produce hybrid secondary metabolites in S.erythraea, i.e. erythromycin analogues which may have improved properties or as hybridisation probes for isolating homologous genes involved in glycosylation of macrolactones in macrolide-producing strains (specifically oleandomycin-producing strains of Streptomyces antibioticus).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Bacterial infection; anti-bacterial; vaccine; whooping cough; type III secretion system; virulence factor; pathogenicity island; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Bordetella pertussis possesses a type III secretion system. Type III secretion systems allow bacteria to target virulence factors directly at bost cells. A pathogenicity island is a compact, distinct genetic unit carrying virulence genes. The present sequence is a pathogenicity island from B. pertussis. The present sequence encodes a number of proteins involved in the type III secretion system of B. pertussis i.e. Bordetella pathogenicity protein. The proteins encoded by the present sequence may be used to treat or diagnose B. pertussis infection, e.g. as a vaccine. Mhooping couch is a disease caused by infection by B. pertussis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel polypeptides derived from Mordetella pertussis, useful for treating and diagnosing Bordetella infection -

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 5436391

GENERAL INFORMATION:

PAPLICANT: Hideya FUJIMOTO, Kimiko ITOH

APPLICANT: MiKihiro YAMAMOTO, and Ko SHIMAMOTO

TITLE OF INVENTION: Insecticidal Protein-encoding Gene, Gramineous

TITLE OF INVENTION: Plants Transformed with the Gene, and Production Thereof

NUMBER OF SEQUENCES: 35

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0

/clone_"lbb="cucis One of two most popular grains in the world Half of the world popular grains in the world Half of the world population especially those inhabiting highly populated areas of the humid tropics and subtropics, rely on rice as their primary source of carbohydrate. Monocotyledomous rice is a diploid plant (2n-24) with a happioid genome equivalent of 4% bpp (Arumuganathan and Earle, 1991). The relatively small genome of rice, three times larger than that of 4% bpp (Arumuganathan and Earle, 1991). The relatively small genome of rice, three times larger than that of architect positional cloning, physical mapping and genome sequencing of rice, we have constructed a BAC library from Oryza sativa, Nipponbare aricity. The library contains 36,864 clones with an average insert size of 1285. Kb providing 10.9 haploid genome equivalents. The deep coverage allows the isolation a particular sequence with a probability of 99.9%. Two high density litters, each containing 18,432 clones (doubly spotted), represent the whole library for colony screening."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
